Imagine AI saving you 2 hours per day

There are 260 workdays in a year.

The total hours saved in a year:

2 hours x 260 days = 520 hours/year.

The total hours saved in workdays:

520 hours ÷ 8 hours/day = 65 workdays.

If AI saves you 2 hours per day, it saves you approximately **65 workdays per year!**

You can focus on new ideas, new skills, new customers, or increasing

ASAP Knowledge Navigator: Azure OpenAI/ML ChatBot with Retrieval-Augmented Generation (RAG)

Enhance efficiency and simplify data engagement with ASAP's advanced RAG system!

ASAP Knowledge Navigator combines interactive GPT chat and advanced AI features within a strong Azure cloud framework for intelligent knowledge management. It excels in managing diverse data formats with unmatched precision

RAG: Enhancing Efficiency and Cutting Costs in Knowledge Management

RAG offers a quicker and more cost-effective solution compared to retraining a model with new datasets. It also allows users to easily switch out sources as needed.

In fact, any organization can transform its documents, technical guides, policy manuals, and AI chat logs into knowledge bases that improve LLMs. These resources can support various applications, including customer service, employee training, and boosting developer efficiency.

The ASAP Knowledge Navigator RAG is a multi-tenant, multi-user, multi-agent RAG system utilizing Azure Cosmos DB and DiskANN Vector Store. It integrates AI chats, documents, and Office 365 through Microsoft Graph.

AIWritingAssistant

Advanced AI tool for business communications, documentation, and professional and creative writing.

With over 50 writing settings and limitless combinations, AIWriting Assistant offers unparalleled customization to meet your unique writing needs.

How is ASAP giving professionals back their time?

ASAP Is a No-Code Solution. All you need to do is provide your instructions in natural language to the AI agent.

ASAP Is a Multi-Agent Platform. By utilizing multiple AI agents, ASAP eliminates the need for complex prompts, coding, and API integrations.

ASAP Automates Complex Workflows. It can handle a wide range of workflows, from client status updates and information gathering to coding and reporting, significantly reducing the time spent on repetitive tasks. Each AI agent acts as a specialized expert, focusing on specific tasks. This results in coordinated, faster, and more efficient automation, maximizing performance and productivity.

Smart User Interface. With ASAP's smart UI—a mix of command-based and intent-based elements—you'll find it adapts to your behavior in real time. This minimizes the need for manual intervention and saves you time. Plus, you can easily customize each workflow to meet specific goals—all with just a click—no prompting required.

Settings. You can also use diverse settings to tailor the agent for specific objective, writing style, length, audience, and more.

No complicated API integrations!
It's all done for you.

Why ASAP?

ASAP is a cornerstone of modern businesses, where automation and integration work hand in hand:

Cutting-edge AI Agents: ASAP's AI agents are specifically designed to automate recurring, time-consuming workflows autonomously, drastically reducing the need for human involvement in routine processes. [Learn more](#)

No-code AI Solution: ASAP automatically generates the code needed for sophisticated multi-agent collaboration, streamlining the process and eliminating the need for users to code, write complex prompts, or integrate APIs.

Integrated with Microsoft Graph: ASAP leverages Microsoft Graph's API, allowing users to access data from a wide range of Microsoft services, including Outlook, Teams, OneDrive, and more. This integration results in more seamless, efficient, and intelligent solutions for businesses.

Security and Privacy: ASAP streamlines and simplifies workflows while keeping your information private, secure, and compliant. ASAP's GenAI agents are hosted in a highly secure Microsoft Azure environment,

The diagram illustrates the central role of 'Ontology' in a 'Multi-Agent AI' system. It is surrounded by eight interconnected AI modules: AIMailMatrix, AIWritingAssistant, AutoMateForms, EmailWhiz, AIReportGen, AICodeGen, ChronoAI, and ContactFetcher. Each module is represented by a circular icon featuring a stylized AI head. Arrows point from each module icon towards the central 'Ontology' circle.
